Mattias Paul
Senior Consultant @ Kundelab

ABOUT ME

Personal intro

Hi, I'm Mattias. I connect people, processes and technology.

I started in first-line support while studying marketing, discovering how much good systems matter to both customers and colleagues. Curiosity led me into IT, where I found my place helping people work smarter through better tools and processes.

Today, I'm based in Stavanger and work as a consultant at Kundelab, helping teams build better customer experiences with Zendesk. I enjoy making sense of messy challenges and working with people to turn ideas into practical improvements.

Outside work, competing nationally in sports has shaped my drive, discipline, and approach to setbacks. I bring that same mindset to learning: stay curious, keep improving, and be ready for the next challenge.

Languages

Norwegian, native English German

EXPERIENCE

From first-tier agent to the Zendesk admin

Jun 2026 – now
Senior Consultant, Kundelab
Zendesk setup and optimisation, automation, project management, workshops and training.

2025 – 2026
Customer Success Manager, Aritma
Helped build Customer Success and a shared customer journey; payment solutions and bank integrations.

2024 – 2025
Customer Success Specialist, Aritma
Bank migrations and mergers, SQL troubleshooting, Azure DevOps testing, HubSpot super admin.

2022 – 2024
Support Systems Lead, Lyse Dialog
Owned Zendesk for the Lyse group and Altibox; automation in Zendesk and Power Platform.

2021 – 2022
Shift Lead, Lyse Dialog
Daily customer centre operations, staffing and incident follow-up.

2019 – 2021
Customer Advisor, Lyse Dialog
Private and business customers by phone, chat and social media.

PROJECTS

On my desk

Featured project

Unifying customer service on Zendesk at Lyse Dialog

29 → 5
Average handling time per ticket, in minutes (Feb 2021 to Mar 2022)

2.8K → 511
Tickets per week at the January 2022 peak, and three weeks later

3 days
Until a pending ticket gets its first automatic reminder

CHALLENGE

KS Energi moved its customer service to Zendesk in February 2021. Agents had to work across several systems, and from early December 2021 to late January 2022 rising energy prices brought a surge of enquiries, about ten times the usual volume.

MY CONTRIBUTION

I handled much of the Zendesk configuration: Bump-Bump-Solve for automatic reminders on pending tickets, closing them after the second reminder; follow-up on on-hold tickets, with an update to the customer after 3 days and the ticket reopening for the agent after a week; views that combine personal and unassigned tickets, raise customer replies to high priority and serve the next ticket with the Play button; and auto-replies with the top 3 answers on invoice and payment tickets.

TOOLS

Zendesk Suite, Bump-Bump-Solve

OUTCOME

Average handling time fell from 29 to 5 minutes per ticket. During the surge, the team used Explore to adjust opening hours and staffing, and was back in control within about three weeks of the January peak.

Results credited to the KS Energi and Lyse Dialog customer service team, as described in Zendesk's customer story and the team's own reporting.

Handling the TV 2 surge at Lyse Dialog

CHALLENGE

When negotiations between TV 2 and Altibox broke down, enquiries surged. It was all hands on deck: customer service, analytics, sales and back office.

MY CONTRIBUTION

I made the system changes: I set up dedicated queues in Puzzel and ticket groups in Zendesk, wrote macros for support and chat, ran a one-off automation that solved tickets with no reply, and set up automated FAQ answers for tickets submitted in this category.

TOOLS

Puzzel, Zendesk

OUTCOME

The surge did not clutter the established groups. New colleagues could be onboarded to this one queue faster, and staffing could be matched to it.

A team effort across customer service, analytics, sales and back office; I made the changes in the support systems.

MY TOOLKIT

The tools I work with

Zendesk

Owned the Lyse group's Zendesk and now set it up and optimise it for Kundelab clients.

HubSpot

Super admin for Customer Operations at Aritma.

Notion

Internal documentation.

Microsoft SQL Server

Used SQL for troubleshooting at Aritma.

Microsoft Power Automate

Built flows for different processes at Lyse Dialog.

Azure DevOps

Wrote user stories and tested new releases at Aritma.

Postman

Testing APIs, consent flows and basic requests.

ChatGPT and Claude

Brainstorming and critique.

EDUCATION AND CERTIFICATIONS

On the shelf

Certificates

Nov 2026 **Applied AI Foundations**
OpenAI, valid until May 2027

Nov 2026 **AI Foundations**
OpenAI, valid until May 2027

Aug 2026 **Zendesk Partner Solution Consultant Specialist**
Zendesk

Apr 2026 **Zendesk AI**
Zendesk
